

MOHAMMAD MARUF

PROFILE

I am a recent B.Tech graduate in Computer Science & Engineering with a strong foundation in programming, algorithms, and software development. Throughout my academic journey, I've developed a keen interest in coding, particularly in languages like Java and Python. I have also gained hands-on experience in web development, data structures, and databases.

Digital Platform for Signal Analytics

A digital platform for signal analytics serves as an integrated solution to collect, process, analyze, and visualize various forms of signals, such as audio, video, or sensor data. These platforms leverage advanced technologies like machine learning, signal processing algorithms, and

big data analytics to provide real-time insights and decision-making tools for various industries and defense,.

PROJECTS

KEYBOARD AUTOSUGGESTION SYSTEM

Developed a Python-based autosuggestion system to enhance user input efficiency by providing real-time word predictions. Implemented using natural language processing (NLP) techniques and machine learning algorithms to analyze user input and suggest relevant words or phrases

NUMBER PLATE DETECTION SYSTEM

Developed an automated number plate detection system using Python to enhance vehicle identification and tracking. Implemented computer vision techniques with OpenCV and machine learning algorithms to accurately detect and recognize vehicle license plates in real-time.
